EDUCATION

Eastern Michigan University

Master of Science in Computer Science

Coursework: Artificial Intelligence, Computer Vision.

Ypsilanti, MI

May 2028

University of Michigan

Bachelor of Science in Engineering in Computer Science

GPA: 3.6/4.0

Coursework: Operating Systems, Web Systems, Data Structures/Algorithms, Human-Centered Software, Building Data Driven Application, Database Management System, Computer Organization, Linear Algebra.

Ann Arbor, MI

December 2025

SKILLS

Programming and Framework: C++, Java, Python, SQL, VS code, GitHub

Web Development: HTML, CSS, Flask, JavaScript, React API, WordPress

Software: Microsoft 365, Google Workspace, Adobe, Auto CAD, Jira

Languages: English, Arabic, Turkish

WORK EXPERIENCE

University of Michigan

Website Developer, Michigan Engineering Zone

Ann Arbor, MI

June 2025 - Present

- Developed the MEZ website using WordPress to enhance intuitive interface experience for diverse users.
- Conducted iterative testing and debugging to ensure smooth integration of system updates.
- Implemented reusable components and automated workflows to improve website performance, maintainability, and content management.

Project Coordinator

June 2024 – August 2026

- Implemented a scalable Canvas learning platform to automate onboarding and training, using structured stand-ups and progress tracking to optimize delivery and reduce operational friction.
- Led cross-functional technical and instructional teams to deliver 10 STEM programs, managing workflows, dependencies, and execution for programs serving 90+ students.
- Delivered data-driven presentations to stakeholders summarizing outcomes, and improvement opportunities.

Inter-University Consortium for Political and Social Research

Program Specialist Intern

Ann Arbor, MI

June 2023 – August 2024

- Conducted usability testing on AI platforms (e.g., ChatGPT, Copilot), collecting and analyzing student data to evaluate effectiveness for educational support and user experience.
- Analyzed user needs and technical issues to identify problems and support improvements to technology platforms.
- Resolved 50+ technical issues through Jira Service Management, troubleshooting university technology systems and documenting solutions.

University of Michigan

Insta 485

Ann Arbor, MI

- Implemented a client-side dynamic Instagram clone with React and Flask REST API for posts, likes, and comments using asynchronous JavaScript and real-time UI updates.
- Implemented infinite scrolling, dynamic content loading, and double-click to like for a real-time user experience.

Multi-threaded Pizza Delivery System

- Designed and implemented a concurrent pizza-delivery simulator in C++ supporting D drivers and C customers using custom thread library (CPU, threads, mutexes, cv).
- Ensured thread safety, liveness and correctness through synchronization to prevent race conditions and deadlocks.

Mini Google Clone

- Developed a scalable Python-based search engine using MapReduce, implementing a segmented inverted index, integrating TF-IDF and PageRank scoring, and deploying REST API and dynamic search servers.

Image Processing System

- Implemented energy-based image resizing in C++ using dynamic programming and optimization over pixel grids.
- Computed pixel energy maps and minimum-energy seams, applying foundational computer vision principles.
